Dear Hiring Manager,

I would like to write to you in order to let you know about my intention to join your company as a Frontend Developer. With three years of experience developing AI-based products, I am proficient in React, Next.js, Mantine, and Tailwind CSS, delivering robust solutions quickly and efficiently in a lean environment.

Currently, as a Frontend Engineer at Fixity LearningPad, I develop a frontend for an AI-based learning platform which serves more than 5,000 daily active users. I manage the whole product lifecycle including designing, coding, and deploying into production. It usually takes me 2-5 days to release a working solution, be it a streaming AI chatbot or a set of AI-based studying tools. In addition, I developed an OMR + AI evaluation system which improved the grading process significantly – up to 80%, excluding any per-user review and enabling batch processing.

In addition to working on features, I also place great emphasis on developer experience and future-proofing the codebase. I designed a modular component architecture and established coding standards that helped onboard developers faster and improved the codebase's AI-readiness. In previous roles, I developed a QR-coded restaurant order management system that cut down staffing requirements by half at Bookingjini and provided full-stack mobile functionalities for Badho using React Native and GraphQL, along with Mixpanel analytics instrumentation.

Away from my work commitments, I maintain several side projects and participate in open-source initiatives. Some examples include PR Pilot, which is an AI-driven code review tool, and GPT Lawyer, an autonomous AI lawyer application powered by OpenRouter, indicating my fascination with developing AI-integrated products that solve practical problems. More details about my work can be found on my website – <https://ashutoshdash.in>.

I perform best in environments where agility, responsibility, and craftsmanship are highly valued. I would like to bring this attitude to your organization and would be happy to explore potential contributions further.

Warm regards,

Ashutosh Dash
